

Too much and too little, this is the typical problem of water in urban regions. This Masterstudio deals with the role of water in delivering quality and essential services to cities, and with the conflicts related to it. We will explore, discuss, and project the future of water within and outside dense urban environments like Amsterdam, rethinking the relation between urban environments and water, globally and locally.

Federico Savini

Coordinator of Masterstudio of Post-growth planning, University of Amsterdam

Mirjana Milanovic & Anouk de Wit

Coordinators Masterclass Ruimte & Duurzaamheid, Municipality of Amsterdam
